

Comfort in Hospitals Makes All the Difference

Bryan is a 13 year old patient who was admitted to **Holguin Pediatric Hospital in Cuba** due to a recurrence of leukemia, which he has been fighting for 8 years. His mother stays with him at the hospital and told us that the **patient treatment chairs and mobile IV poles** that Global Links provided make it easier and more comfortable for her and her son during their hospital stays.

The director of the hospital allocated the high-quality donations that we provided post hurricane Irma to the **pediatric cancer ward** because, "These are the patients with the longest hospital stays and they deserve the best quality and comfort during their treatments."
