Global Links Furnishings and Supplies Equip New Honduran Clinic

For the people who live in Siguatepeque, Honduras the nearest reference hospital is 40 minutes away by car, which can be a challenging trip for people living without reliable transportation. Luckily, the recent opening of the Policlínico de Siguatepeque (Polyclinic of Siguatepeque) has eased that burden by providing internal medicine services and emergency medicine closer to home. The clinic has also begun to offer pediatric and OB/GYN services.

Global Links then donated furnishings and medical supplies (featured above) to equip the clinic. The pictures on the left-hand side show office furnishings that were used for waiting rooms and doctors' offices and the bottom right photo shows a donated crash cart that stores recovered medical supplies. All of these supplies will make a substantial impact in helping the Policlínico de Siguatepeque to provide quality healthcare to approximately 38,741 patients annually.
