## Working with Hospitals in Honduras in Need of Supplies

Global Links continues to work with health facilities in Honduras in areas recovering from hurricanes and in areas where there is a lack of resources to meet the high demand for surgery and maternal/pediatric services. Through an agreement with the Honduran Ministry of Health and the Pan American Health Organization/World Health Organization, hospitals like San Isidro Hospital, which serves 100,000+ people, received hospital beds, bassinets, waiting room chairs, nebulizers, sutures, gloves, and more. The General Director of the hospital described, ***"Today San Isidro Hospital received a very good donation from Global Links for which we are very grateful. With these [supplies, furnishings, equipment] we will update some spaces which have been abandoned for a long time."***
