

Enabling Healthcare Workers to Improve Primary Care Services

Global Links provided supplies to a Primary Health Care Unit and an Integral Health Center in the Atlántida region in Honduras, benefiting approximately 522,996 people annually. The medical materials provided will strengthen primary care services, as well as the Maternal-Infant Program, Teen Services, and Tuberculosis Program, enabling healthcare workers to improve existing services and offer new ones such as vaccination campaigns and dental and mental health services, ensuring better care for residents in the area.

Dr. Candida Maria Cruz Diaz shared in a video, *"I want to express my sincere gratitude to everyone involved from Global Links and all the individuals who make such important contributions that allow us to receive these donations. These donations have not only benefited pregnant women, but the entire healthcare system. They have improved the work environment for professionals, created a better environment for patients in every health facility, and benefited the entire population served by our health centers."*
